

Windows: I manage to login and I can see people talk but I can't talk, join or start a game, what's going on?

This is a problem for windows users with Nvidia chipset. They receive the server messages but can't send some back. It's a network card problem.

Here is a method to get rid of the problem:

- Go to "Start" › "Control Panel".
- Double click to open "Network Connections".
- Right click on your network adapter and go to properties (should be labeled as "NVIDIA nForce Ethernet Controller").
- Click on "Configure" and go to the "Advanced" tab.
- Select "Checksum Offload" and choose disable in the window to the right. It may be called Hardware Checksumming or a Checksum of some type.
- Click on Ok.

Thanks to Phoe for that fix.
